Comments on LightSquared Technical Working Group Report (Docket No. 11-118)

Dear Mr. Dorsey:

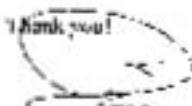

America is adrift from the FCC; can do nothing to get us back on track by allowing LightSquared to continue their billions in private sector investment to create a high-speed 4G cell phone network. As I watch our deployable nation's GPS industry, I can't believe that we could be living yet another development that is dragging our country close to insolvency.

I see the GPS corps are gaming the system and doing whatever it takes to win a company's story to the sake of winning. And for what result? To make more money. What really interests me is that the GPS industry will actually benefit by improvements to the national broadband infrastructure. And with the new network comes new places that teens and adults alike will download to.

Every new phone I see has GPS on it, so for them to claim that LightSquared is threatening look like some lame ass and user perspective. America needs this new network bad y, and we must make it just & survive, so please don't believe their stories and please don't let their Wall Street influence sway you.

I also want to challenge their claims about interference. I find it hard to believe that if the new network would hurt the existing GPS technology that almost everyone is using that the agency would get fit for Eric Clegg +4 with their selfish motives and poor judgment, would work even as the aisle to stop that from happening. Since I've seen almost nothing from the few honorable Congress people to stop the 4G network I have to assume that GPS is just an extension of the corporate bid GPS.

I think Bernie Sanders or John Kerry or John Lewis come forward to say that they are appalled at what this could do to people. I would be willing from another vantage point. But I don't know, and don't expect to, I have to insist that you approve this request from LightSquared. It will create jobs, close or end the digital divide and help consumers small business improve at a time when we need all three.

  
Julia Norman
